**Strengthening Social Systems and Social Structure in Facing Disaster Threats in Pala City Indonesia**

**Abstract**  
Disasters are not only caused by environmental vulnerability but also by social system and social structure problems. It requires strengthening the social system and social structure. This study aims to produce (1) social capital strengthening in face disaster threats (2) strengthening the role of family social institutions in face disaster threats and (3) a model of strengthening the social system and social structure in face disaster threats. This research used a planning-sequential transformational design. Data collection used observations, in-depth interviews, of journals and literature studies. The sample was 148 people.

The results showed that (1) social capital strengthening occurred through religious activity, education, disaster counseling and awareness of disaster risks (2) strengthening family social institutions through knowledge of monitoring activities, early warning systems and rights and responsibility, knowing evacuation route and safety of self and others and (3) The model of social system and social structure to strengthen the face of disaster threats is togetherness and
