Keywords: leading sector; agriculture; economic potential; agropolitan

Abstract: Economic growth is a main factor in the development of a region. There is a specific relationship between the level of economic growth and regional development, wherein a good economy will be able to improve the quality of infrastructure, public services, regional wealth, and people's quality of life, and reduce unemployment rates. This study was located in Maros Regency. To avoid a decrease in the regional economic growth rate, it is necessary to formulate economic policies contained in a sustainable roadmap, with the research sequences; identification of leading sectors, formulation of economic growth models and strategies, determination of strategic priorities, and preparation of the road map itself. This study used quantitative-qualitative methods. Location Question (LQ) analysis was used to calculate agricultural potential; food crops, horticulture, fruits, plantations, animal husbandry, fisheries, and exploring the potential of horticulture in the Mallawa sub-district. SWOT analysis was used to formulate a development strategy for the Mallawa Sub-district as an agropolitan area. The results of the analysis of this study concluded that the agricultural sub-sectors that had superior LQ scores > 1 were Horticultural Plants (Vegetables), Crops, Fruit Plants, Plantations, Livestock, and Fisheries. Referring to the results of this analysis, the Mallawa District has the potential to be developed as an Agropolitan Area. The development strategy for the Mallawa subdistrict as an agropolitan area, which was formulated using SWOT analysis, concluded that the development strategy for the agropolitan area for the Mallawa subdistrict is in quadrant I with the formulation between strengths and opportunities so that it can be developed as an agropolitan area.
