Dear Authors,

Welcome to Xinan Jiaotong Daxue Xuebao/Journal of Southwest Jiaotong University!

Thank you for contacting our Editorial Board Members.

Your article have been reviewed. Article need to be minor revised as required below.

If you want to publish in Journal of Southwest Jiaotong University, Volume 55 (1), 2020, you need to send the following to the editorial office via editor@jsju.org:

1. The article, strictly formatted according to the template recommendations for authors and correct the article on the reviewers' recommendations, see <http://jsju.org/JournalTemplate.docx>
2. Certificate of the English language editing from a leading company or your agreement to pay for editing services to the editorial office (EUR 200).
3. Plagiarism Check Report. The originality of the article should be at least 95%.
4. FILLED IN AND SIGNED Cover Letter and Copyright Agreement.

Send all this till January 17 If you want to publish in Journal of Southwest Jiaotong University, Volume 55 (1), 2020.

Southwest Jiaotong University, volume 55 (1), 2020.

The total amount of your payment is EUR 500. Payment is made only after acceptance of the article.

1. The purpose of this article should be added to the abstract.

abstract template (250 words):

The article describes a new method/idea (etc.) ..., based on ..., enabling to Using (describe the methods), the authors (describe the obtained results)..... As an example, we illustrate the proposed method/technique... Our method/proposal allows to improve (any quantitative indicators by XX, X%)... The new method effectiveness evaluation is confirmed by the calculation New research results develop/supplement/improve ... and can be used for....

2. Article should be prepared strictly according to the template; please check the link <http://jsju.org/JournalTemplate.docx>.

3. Structure of the Article

Please follow this logic in writing the paper: first, briefly highlight the idea, then describe the methods for achieving the goal and the planned results, and only after that proceed to the detailed presentation. When reviewing the literature, you should not simply list the sources, but analyze them. You should explain with specific examples what has already been done by other scholars, what tasks are ahead, and in which direction you plan to move, that is, you have to introduce the reader to the research background and explain the place of your study in it.

The pages should be numbered consecutively, starting with the title page and through the text, and reference list.

The structure of the manuscript should be organized as follows: title, author(s), affiliation(s) (institutions), city, country, e-mails of authors (preferably institutional), Abstract (in English and Chinese), Keywords (in English and Chinese), Introduction, Research Aim, Literature Review, Research Methods, Results, Discussion, Conclusions and Suggestions for Practical Use, Acknowledgements (can be added if necessary), References (in English and Chinese).

Title should be brief and informative, specific and amenable to indexing. The title should contain less than 15 words, each starting with a capital letter, and be centered, typeset the title in bold, Times New Roman (TNR) 16pt, single line spacing.

Names and affiliations (institutions) of the authors, city, zip code, country, E-mail address(es) of the author(s) should be listed. This information should be centered, typeset TNR 10pt, and single-spaced.

Abstract should be limited to 1 paragraph (250 words) and convey the main points of the paper, outline the results and conclusions, and explain the significance of the results. Any inessential abbreviations (those personally invented, in particular), any formulas, references to bibliography, figures and/or tables are inadmissible in the abstract. Typeset your Abstract in TNR 11 pt, alignment: justify; line spacing: single.

Keywords: Not more than five keywords should be indicated separately; these should be chosen carefully and must not be phrases of several words. Typeset your keywords in TNR 10 pt, alignment: justify; line

Keywords: Not more than five keywords should be indicated separately; these should be chosen carefully and must not be phrases of several words. Typeset your keywords in TNR 10 pt, alignment: justify; line spacing: single. These keywords will be used for indexing.

The main text: Typeset the main text TNR 11 pt in 2 columns with an interval between columns of 1 cm, alignment: justify, indentation: 5 mm, line spacing: single.

Introduction: All papers should have a brief introduction (1.5-2 pages). The text should be intelligible to readers in different disciplines and technical terms should be defined. This is the reader's first impression of your paper, so it should be clear and concise. Include relevant background information on your topic, using in-text citations as necessary. Report new developments in the field, and state how your study fills gaps in the existing research. Focus on the specific problem you are addressing, along with its possible solutions, and outline the limitations of your study. You can also include a research question, hypothesis, and/or objectives at the end of this section.

FORMATTING TIPS:

- Organize your information from broad to narrow (general to particular). However, do not start too broad; keep the information relevant.
- You can use in-the-text citations in this section to situate your research within the body of literature. These citations should be numbered sequentially in the order they appear in the text [1], [2], etc., and are organized accordingly in the References section.

procedures in a clear, logical order so that other researchers can reproduce your results. Simply refer to the established methods you used, but describe any procedures that are original to your study in more detail.

FORMATTING TIPS:

- Identify the specific instruments you used in your research by including the manufacturer's name and location in parentheses.
- Stay consistent with the order in which information is presented (e.g., quantity, temperature, stirring speed, refrigeration period).

Results: Now that you have explained how you gathered your research, you are to report what you actually found. In this section, taking no more than 6-8 pages, outline the main findings of your research. You need not include too many details, particularly if you are using tables and figures. While writing this section use the smallest number of words necessary to convey your statistics.

FORMATTING TIPS:

- Use appendices or supplementary materials if you have too much data.
- Use headings to help the reader follow along, particularly if your data are repetitive. Headings should be of four-level type. See Template for heading typesetting instructions (<http://jsju.org/JournalTemplate.docx>).

Discussion: In this section, taking no more than 4-6 pages, you should interpret your findings for the reader in relation to previous research and the literature as a whole. Present your general

data are repetitive. Headings should be of four-level type. See Template for heading typesetting instructions (<http://jsju.org/JournalTemplate.docx>).

Discussion: In this section, taking no more than 4-6 pages, you should interpret your findings for the reader in relation to previous research and the literature as a whole. Present your general conclusions, including an assessment of the strengths and weaknesses of the research and the implications of your findings. Resolve the hypothesis and/or research question you identified in the introduction.

Remember, you must be prepared to justify your findings and conclusions, and one of the best ways to do this is through factual accuracy and the acknowledgment of opposing interpretations, data, and/or points of view.

FORMATTING TIPS:

- Use in-text citations to support your discussion.
- Do not repeat the information you presented in the results or the introduction unless it is necessary for a discussion of the overall implications of the research.

Conclusion: Explain how your research fits within your field of study, and identify areas for future research. Even though you may not look forward to the process of formatting your research paper, it is important to present your findings clearly, consistently, and professionally. With the right paper format, your chances of publication increase, and your research will be more likely to make an impact in your field. Do not underestimate the details. They are the backbone of scientific writing and research.

FORMATTING TIPS:

- Use in-text citations to support your discussion.
- Do not repeat the information you presented in the results or the introduction unless it is necessary for a discussion of the overall implications of the research.

Conclusion: Explain how your research fits within your field of study, and identify areas for future research. Even though you may not look forward to the process of formatting your research paper, it is important to present your findings clearly, consistently, and professionally. With the right paper format, your chances of publication increase, and your research will be more likely to make an impact in your field. Do not underestimate the details. They are the backbone of scientific writing and research.

FORMATTING TIPS:

- Keep this section short (1 paragraph).

Acknowledgments: Write this paragraph as brief as possible giving credit to any institution responsible for funding the study (e.g., through a fellowship or grant) and any person (e.g., technical advisors or editors).

References: Here you list citation information for each source you used. The list of references should be arranged in the order in which

References: Here you list citation information for each source you used. The list of references should be arranged in the order in which the sources are presented in the paper (numbered citations). References should be taken over the past five years. The recommended minimum number of references is 20 entries. Before submitting the manuscript, please check each citation in the text against the References and vice-versa to ensure that they match exactly. It is important to format the references properly because all references will be linked electronically as completely as possible to the papers cited.

References should not include unpublished source materials.

References should be formatted as follows:

Book: AUTHOR. (year) Title. (edition). Volume (issue). Access: site/path/file. [10]

Periodicals: AUTHOR. (year) Title. Journal [full name], volume (issue), pages. Access: site/path/file. [11]

Papers presented at the Conferences: AUTHOR. (year, month) Title. Presented at the Conference (title). [Type of information carrier]. Access: site/path/file. [12]

Reports and Guidelines: AUTHOR. (year) Title. Company. City, State or Country. [Type of information carrier]. Access: site/path/file. [13]

Patent/Standard: Author. (year) Title, Patent number. [8]

Technical report: Author. (year) Title. Company, City, State or Country, Tech. Rep. No. [9]

An example of the correct referencing for electronic resources is given below:

[1] ZAHARIA R. M. and GRINDEY D. (2011). Corporate Social

FORMATTING TIPS:

- While doing your final proofread, ensure that the reference list entries are consistent with the in-text citations (i.e., no missing or conflicting information).
- At least 70% of sources in References should contain DOI indices, e.g. DOI: <https://doi.org/10.35741/issn.0258-2724.54.3.4> . If a DOI is lacking, it is recommended to add a link to any online source of an article. All links have to be active.
- Be sure to verify the correctness of the names of authors, pages and titles of journals in the paper lists at <http://www.crossref.org/> (there is a search engine box in the center on the page – copy the source title into it and verify the correctness of the References).
- The list of references should be given in English and Chinese.

Tables and figures should be black and white. They should be referred to in numerical order. Number the tables sequentially, according to their appearance in the text.

All symbols and abbreviations must be defined, and used only when necessary. Superscripts, subscripts and ambiguous characters should be clearly indicated. Units of measure should be metric or, preferably, SI.

Figures: Line drawings should be roughly twice the final printed size. Photomicrographs and other photographs that require it must have a scale bar, which should be defined clearly in the legend. Primary data should be submitted as far as possible (e.g. actual photographs of electrophoretic gels rather than idealized diagrams). The map of China, if forming a part of the article, must conform to official maps

Letters in the figure should be well readable and proportionally commensurable, and in the final, printed size, the font should be 7pt for normal text and not less than 6 pt for captions and symbols in the captions. Figures should follow their short description in the main text.

Tables: Number the tables sequentially, according to their appearance in the text. Place footnotes to the tables below the body of the tables and make the captions to them in superior small letters. Avoid using vertical rulers. Be careful when using the tables and once again make sure that the data given in the table do not duplicate the results described somewhere in the article.

FORMATTING TIPS:

- Captions should be numbered, typeset in TNR 9, line spacing: single.
- Capitalize the titles of specific tables and figures when you refer to them in the text (e.g., "see Table 3"; "in Figure 4").

Mathematical material: The text should make clear distinctions between physical variables, mathematical symbols, units of measurement, abbreviations, chemical formulas, etc. Authors should use italic and boldface to identify physical or mathematical variables. Variables are to be set in normal italic, and vectors, tensors, and matrixes in boldface.

Mathematical equations should be written clearly and accompanied by the necessary information. They should also be separated from the main text.

FORMATTING TIPS:

- Number each equation you present in the text, inserting the number in parentheses.
- Try using MathType or Equation Editor in Microsoft Word to type your equations, but use Unicode characters when typing single variables or mathematical operators (e.g., x , \geq , or \pm) in running text. This makes it easier to edit your text and format your equations before publication.
- Remember to save your math equations as editable text and not as images in case changes need to be made before publication.

Terminology: Stay consistent with the terms you use. Generally, short forms can be used once the full term has been introduced:

- Full terms versus acronyms (e.g., deoxyribonucleic acid versus DNA);
- English names versus Greek letters (e.g., alpha versus α); and
- Species names versus short forms (e.g., *Staphylococcus aureus* versus *S. aureus*).
- One way to ensure consistency is to use standard scientific terminology. You can refer to the following resources, but if you are not sure which guidelines are preferred, check with your target journal.
- For gene classification, use GeneCards, The Mouse Genome Informatics Database, and/or genenames.org.

Dear Authors,
welcome to Xinan Jiaotong Daxue Xuebao/Journal of Southwest Jiaotong University!

Thank you for contacting our Editorial Board Members.

Your paper was accepted for publication in Journal of Southwest Jiaotong University, Volume 55 (1), 2020.

You can pay us in a bank account in London if you do not pay from Iraq. If you have that option, write and we'll send you the invoice.

Dear Authors,
welcome to Xinan Jiaotong Daxue Xuebao/Journal of Southwest Jiaotong University!
Thank you for contacting our Editorial Board Members.

Your paper was accepted for publication in Journal of Southwest Jiaotong University, Volume 55 (1), 2020.

You can pay us in a bank account in London if you do not pay from Iraq. If you have that option, write and we'll send you the invoice.

Please carefully read the information. We are sending you the recipient's account details via WESTERN UNION. This is an option for payment from Iraq.

The payment details are as follows:

Name: IRINA

Last Name: VASILEVA

Country: RUSSIA

Amount: 500 USD + transfer value

500 USD includes: Academic editing and Article Publication Charges.

Unfortunately, our banks do not accept money from your country, so we ask you to transfer payment directly to our translators or reviewers.

Please be careful when filling out your receipt. The payment deadline

Unfortunately, our banks do not accept money from your country, so we ask you to transfer payment directly to our translators or reviewers. Please be careful when filling out your receipt. The payment deadline - not later than January 17, 2020. Then you are required to send everything in one archive (article and accompanying documents, payment proof photo). We will send you a letter of acceptance after we get your payment. The article will be published online within 1-2 months from the date of payment.

If you have any questions, please do not hesitate to contact us via editor@jsju.org.

We thank you for your contribution and support!

Yours sincerely,

教授 翟万明 / Professor Zhai Wanming /
